

PGiRx Solutions

PGiRx PA

Prior Authorization

Simplify. Improve. Save.

PGiRx PriorAuthorization is paramount to improving the quality of healthcare while controlling unnecessary costs. Now PGI Rx PA offers you an automated solution that will simplify, improve, and eliminate costs on your authorization process.

Prior Authorization Solutions

PGiRx PA will manage authorization inventory and precertification requests through a rules based workflow engine that does not require any additional software, hardware, or coding.

Faxes, operators, or scanners simply send the information through our PGI Rx PA application. The document is then processed through OCR technology. The workflow is programmed to search and extract the needed information

in order to approve or deny the authorization based on your businesses rules.

A fax will then be generated to communicate with prescribers and members, of the authorization outcome. Moreover these authorization requests are stored and can be searched and retrieved at any time in any place in a digital form.

Business Moves with PGI

PGi

HIPPA and HITECH Compliant

In accord with personal healthcare security legislation, PGI Rx Prior Authorization will ensure that your company's automated processes seamlessly meets regulations. Allowing your personnel to spend less time maintaining compliance and more time focusing on their patients.

Keeping Accuracy and Consistency at the Center

The PGI Rx PA solution is vital to maintaining and improving the accurate and consistent application of your authorization rules. The automated process will increase the amount of authorizations executed while using less human resources. The dynamic solution will allow you to define the exact parameters needed for each authorization.

Your claims agent will then be notified in real time of the status of each application without ever having to input the claim.

Gone are the days of faxing and calling multiple people in order to generate the information required for the approval stage. PGI Rx PA streamlines the Prior Authorization process without compromising on security or standards.
